Review Date: NA

Purpose and Summary of Document:

The aim of this document is to provide the background to mental wellbeing, what actions can be taken at a local population level to address mental wellbeing, and present potential projects that can be taken forward in support of the PBS identified priority of improving mental wellbeing for all.

Work Plan reference:

Conwy and Denbighshire Public Service Board Health and Wellbeing Plan 2018 – 2023

1 Introduction

Promoting good mental wellbeing for all ages is identified as a priority area in the PSB Wellbeing Plan (2018 – 2023). Lead for this area of work was handed over to Betsi Cadwaladr University Health Board / Public Health Wales in Mar 2019. The local Public Health team was asked to support this priority in Sep 19 and identify potential projects that could be taken forward to promote mental wellbeing in the area.

2 Background

The World Health Organisation (2014) has defined mental health as:

“a state of well-being in which every individual realizes his or her own potential, can cope with the normal stresses of life, can work productively and fruitfully, and is able to make a contribution to her or his community”¹

The New Economic Foundation describe wellbeing as:

‘how people feel and how they function, both on a personal and a social level, and how they evaluate their lives as a whole’.²

An individual’s mental capital and mental wellbeing have a significant impact on their course through life. They are essential for the healthy functioning of families, communities and societies. They have a fundamental effect on behaviour, social cohesion, social inclusion and prosperity.

Mental capital and mental wellbeing – what is it

The Government Office for Science Foresight Report, Mental capital and wellbeing (2008)³ considers that mental capital and mental wellbeing are intimately linked, with measures addressing one affecting the other. As a consequence they should be considered together when developing policy and designing interventions.

Mental capital encompasses a person’s cognitive and emotional resources. It includes their cognitive ability, how flexible and efficient they are at learning and their ‘emotional intelligence’, such as their social skills and resilience in times of stress.

Mental wellbeing is described as a dynamic state, in which the individual has the ability to develop their potential, work productively, build strong positive relationships with others, and contribute to their community.

² New Economic Foundation (2021). Measuring wellbeing: a guide for practitioners. London: New economics.

³ The Government Office for Science (2008). Foresight report, Mental Capital and Wellbeing, Making the most of ourselves in the 21st Century, final report. Available at: https://assets.publishing.service.gov.uk/government/uploads/system/uploads/attachment_data/file/292450/mental-capital-wellbeing-report.pdf

Mental wellbeing is enhanced when an individual is able to fulfil their personal and emotional goals and achieve a sense of purpose in society¹.

Mental wellbeing is not the same as happiness. Happiness usually refers to how people are feeling moment to moment and does not necessarily reflect how they evaluate their lives as a whole, or how they function in the World. Wellbeing is a broader concept and includes how satisfied individuals are with their lives, level of autonomy and purpose in life⁴.

Individuals with good mental wellbeing have:

- A sense of contentment
- A zest for living and the ability to laugh and have fun
- The ability to deal with stress and bounce back from adversity
- A sense of meaning and purpose, in both their activities and their relationships.
- The flexibility to learn new skills and adapt to change.
- The ability to build and maintain fulfilling relationships.

3 Where are we now?

Determining a measure, and therefore a baseline, for mental wellbeing is challenging. Looking beyond the definition of mental wellbeing it is difficult to drill down into what wellbeing really means to individuals day to day. The factors that influence it can lie internally and externally. External conditions, such as income, housing and social networks, and individual's internal resources, such as optimism, reliance and self-esteem, can all affect wellbeing. Due to the complex and dynamic interplay of factors affecting mental wellbeing there is no 'one size fits all' measure.

However, there are three recommended sets of wellbeing questions/questionnaires to measure wellbeing³, the Short Warwick-Edinburgh Mental Wellbeing Scale (SWEMWBS), the Office of National Statistics (ONS) subjective wellbeing questions, and a social trust question. The former two are used to measure wellbeing at a population level.

The ONS wellbeing questions give an indication of mental wellbeing at local authority level. The ONS subjective wellbeing questions are incorporated in the Annual Personal Survey and asks respondents to rate their mental wellbeing according to four questions on a scale of 0-10, where 0 is 'not at all' and 10 is 'completely'. The four personal wellbeing questions are:

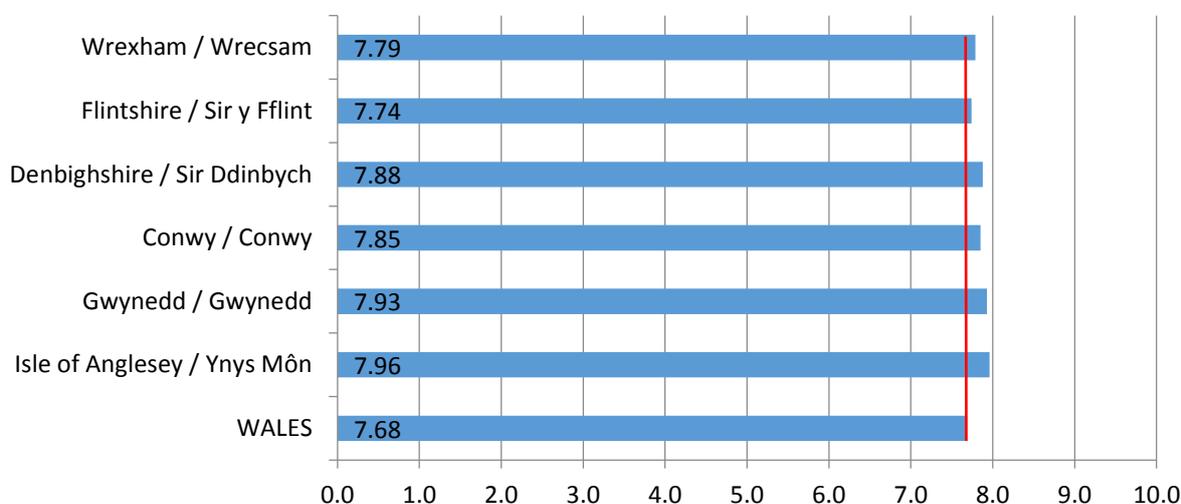

- Overall, how satisfied are you with your life nowadays?

⁴ New Economic Foundation (2012) Measuring wellbeing, a guide for practitioners. Available at: https://b3cdn.net/nefoundation/8d92cf44e70b3d16e6_rgm6bpd3i.pdf

- Overall, to what extent do you feel the things you do in your life are worthwhile?
- Overall, how happy did you feel yesterday?
- Overall, how anxious did you feel yesterday?

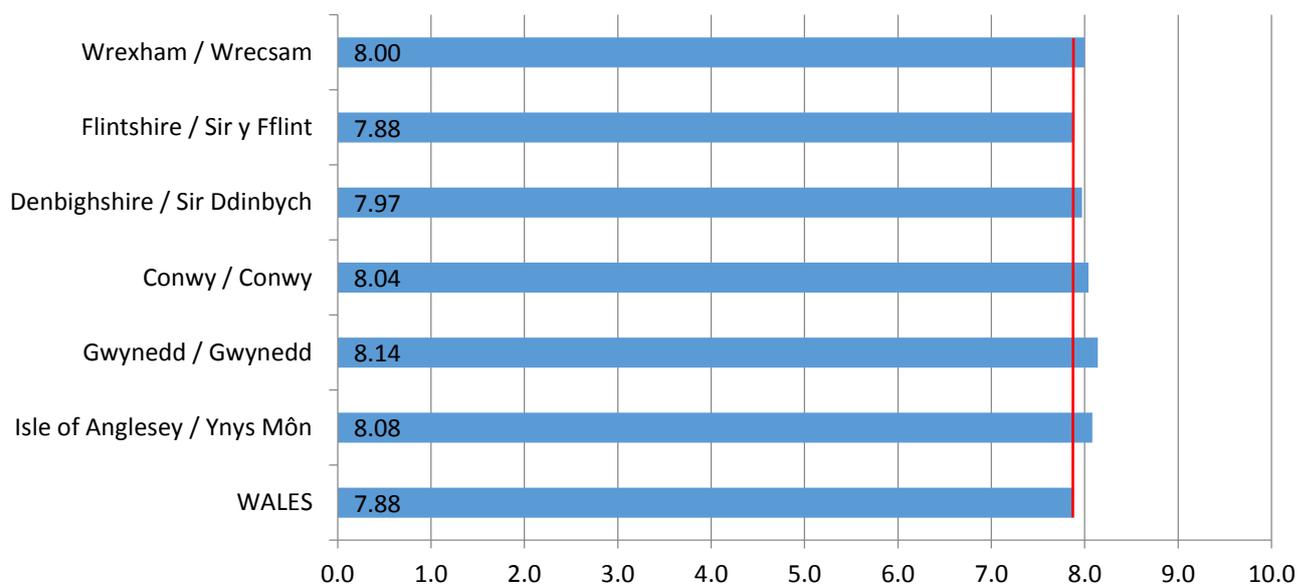

From the scores, indicators are calculated based on scores of 7 and above (high or very high levels of wellbeing), or scores of 3 and below for anxiety (low or very low levels of anxiety). The ONS data⁵ is presented below.

High sense of life satisfaction, age-standardised percentage, person aged 16+, by local authority, North Wales, 2019. Produced by BCU LPHT, using APS (ONS).

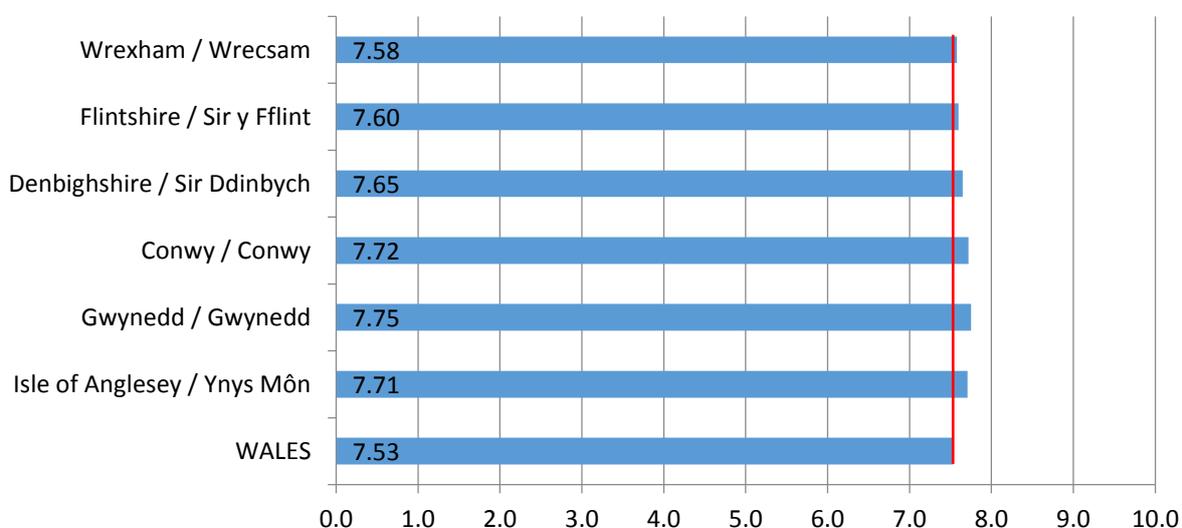

⁵ Office of National Statistics, Annual Personal Survey 2019. Available at: <https://www.ons.gov.uk/peoplepopulationandcommunity/wellbeing/datasets/qualityinformationforpersonalwellbeingestimates>

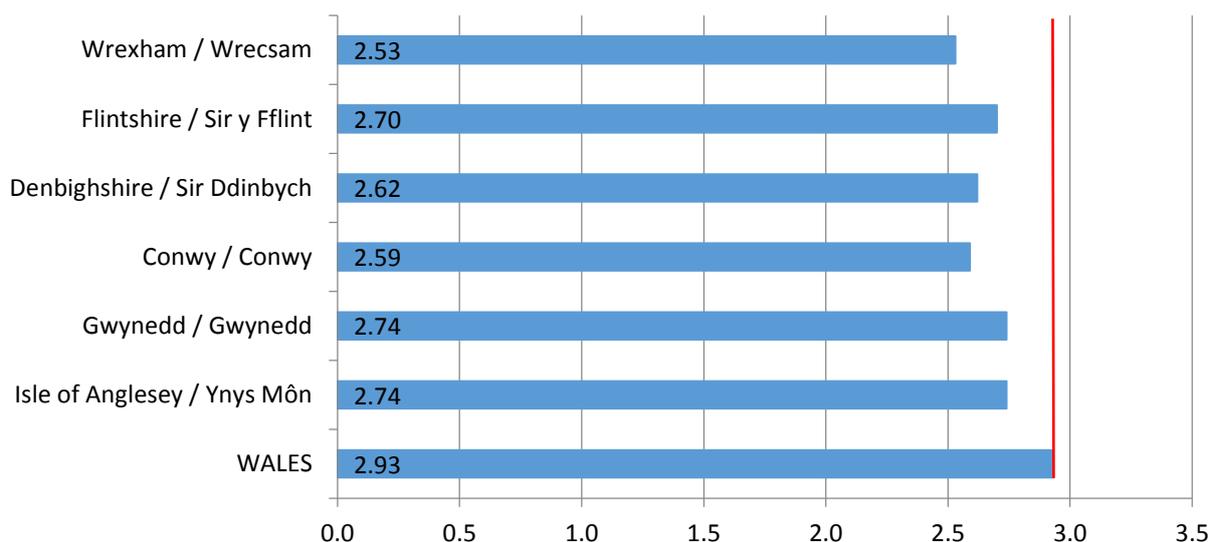

High sense of worthwhile, age-standardised, persons aged 16+, by local authority, North Wales 2019 Produced by BCU PHT, using APS (ONS).

High sense of happiness, age-standardised percentage, persons aged 16+, by local authority, North Wales, 2019. Produced by BCU PHT, using APS (ONS).

Low sense of anxiety, age standardised percentage, person's aged 16+, by local authority, North Wales, 2019. Produced by BCU PHT using APS (ONS).

The data suggests that in terms of high sense of happiness, high sense of life satisfaction and high sense of life worthwhile, Conwy and Denbighshire population are not statistically different from national (Wales) values. It should be noted that values for Wales were lower when compared to other UK nations. The reported values for low sense of anxiety are statistically significantly higher for Denbighshire and Conwy compared to the national average. Denbighshire, in the period Mar 2918 to Mar 2019, showed a 14.9% improvement in average anxiety level, far above the Welsh average improvement of 3%.

As the data is presented at local authority level there is a lack of visibility of what is happening at a community level, therefore there is the potential to have a number of communities which could or are scoring significantly below the national average.

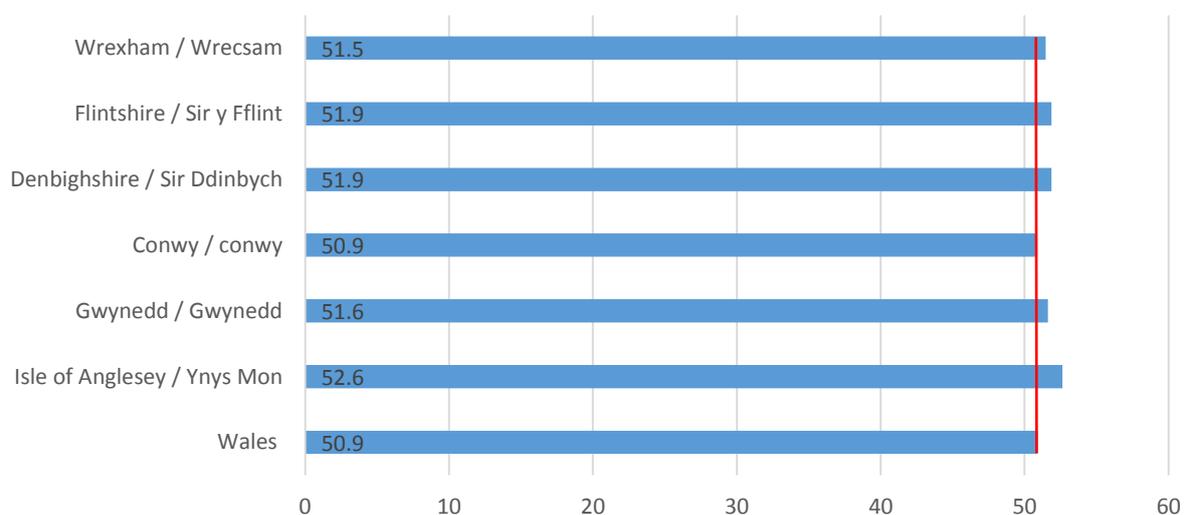

It is estimated that around 1% of the UK population report low ratings across all four personal wellbeing questions. This equates to around 1,700 people for Conwy and Denbighshire.

Self-reported health is strongly associated with how people rate their personal wellbeing and is considered to have the larger relationship with wellbeing than other variables such as age, gender, and ethnicity and employment⁶.

⁶ Office of National Statistics. Measuring National Well-being - What matters most to Personal Well-being? May 2013. Available at: <https://webarchive.nationalarchives.gov.uk/20160105231902/http://www.ons.gov.uk/ons/rel/wellbeing/measuring-national-well-being/what-matters-most-to-personal-well-being-in-the-uk-/art-what-matters-most-to-personal-well-being-in-the-uk-.html#tab-3--Our-findings>

The Warwick-Edinburgh Mental Wellbeing Scale (WEMWBS)⁷ is a validated collection of 14 questions covering feelings and functioning aspects of mental wellbeing. Scores range between 14 and 70, where a higher score indicates higher mental wellbeing.

Warwick-Edinburgh Mental Wellbeing Scale (WEMWBS), age-standardised average score, persons aged 16+, by local authority, North Wales, 2017. Produced by BCU PHT, using NSW (WG)

The average score for Wales was 50.9, out of 70 in 2017. Conwy had the same score and Denbighshire was slightly higher at 51.9 but not statistically significantly higher. Anglesey was the only North Wales local authority that was significantly higher at 52.6.

4 Addressing Mental Wellbeing

Building good mental wellbeing can be seen as more about avoiding mental health problems and illness and developing mental resilience.

Multiple social, psychological and biological factors determine the level of mental wellbeing of a person at any point in time. Poor mental wellbeing is associated with rapid social change, stressful work conditions, gender discrimination, social exclusion, unhealthy lifestyle, and physical ill-health. There are also specific psychological and personality factors that make people vulnerable to poor mental wellbeing. Therefore, addressing and promoting good mental wellbeing requires a range of approaches that encompass all these factors.

⁷ Tennant R, Hiller L et al. *Health Qual Life Outcomes* (2007). The Warwick-Edinburgh Mental Well-being Scale (WEMWBS): development and UK validation. Available at: <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC2222612/> Accessed 02 Jan 2020.

The World Health Organisation produced some specific ways to promote mental health and wellbeing⁸:

- early childhood interventions (e.g. providing a stable environment that is sensitive to children's health and nutritional needs, with protection from threats, opportunities for early learning, and interactions that are responsive, emotionally supportive and developmentally stimulating);
- support children (e.g. life skills programmes, child and youth development programmes);
- socio-economic empowerment of women (e.g. improving access to education and microcredit schemes);
- social support for elderly populations (e.g. befriending initiatives, community and day centres for the aged);
- programmes targeted at vulnerable people, including minorities, indigenous people, migrants and people affected by conflicts and disasters (e.g. psycho-social interventions after disasters);
- mental health promotional activities in schools (e.g. programmes involving supportive ecological changes in schools);
- mental health interventions at work (e.g. stress prevention programmes);
- housing policies (e.g. housing improvement);
- violence prevention programmes (e.g. reducing availability of alcohol and access to arms);
- community development programmes (e.g. integrated rural development);
- poverty reduction and social protection for the poor;
- anti-discrimination laws and campaigns;
- promotion of the rights, opportunities and care of individuals with mental disorders.

A whole range of factors determine an individual's level of personal wellbeing but evidence indicates that the things we do and the way we think can have the greatest impact. The New Economic Foundation (NEF) conducted an extensive review of the evidence, as part of the 2008 Mental Capital and Wellbeing Project, of what is most important for positive mental health and mental capital at an individual level. From the evidence base a long list of actions was reduced to a set of five key messages, based on the

⁸ World Health Organisation (2018). Mental health strengthening our response. Available at: <https://www.who.int/news-room/fact-sheets/detail/mental-health-strengthening-our-response> Accessed 2 Jan 2020.

evidence, around social relationships, physical activity, awareness, learning and giving – the Five Ways to Wellbeing⁹.

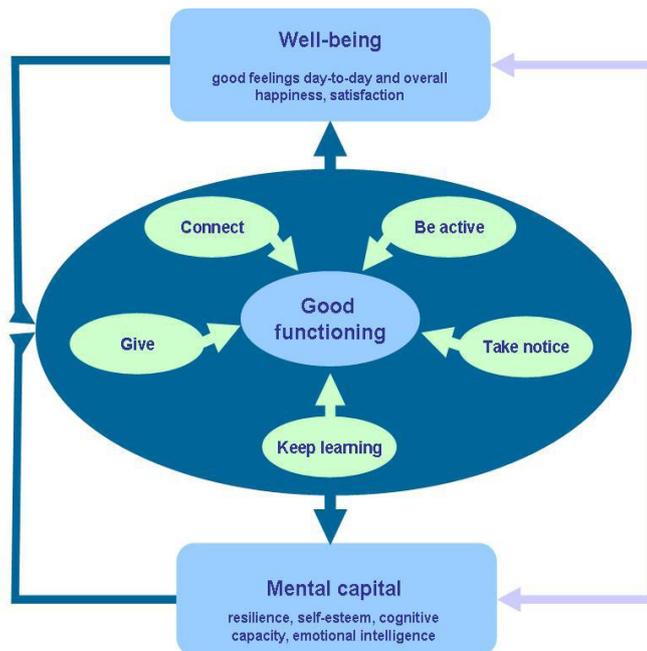

The Five Ways to Mental Wellbeing

Given that repetition can remove the potency of activities, it has been suggested that the strategies need to have variation in order to stay fresh¹⁰. This is why the Five Ways action themes are distinct allowing people to try differing approaches to promoting their mental wellbeing without feeling that their efforts are stagnating. In addition different approaches will suit different people.

⁹ New Economic Foundation (2011). Five Ways to Wellbeing. A report presented to the Foresight Project on communication the evidence base for improving people's wellbeing. Available at: https://neweconomics.org/uploads/files/d80eba95560c09605d_uzm6b1n6a.pdf Accessed 02 Jan 2020.

¹⁰ Lyubomirsky S, Sheldon KM, Schkade D (2005). 'Pursuing happiness: the architecture of sustainable change' *Review of General Psychology* 9:111-131.

How the Five Ways actions enhance personal wellbeing⁹.

The action themes are designed to promote their own positive feedback loop so they reinforce similar and more frequent well-being promoting behaviours.

For this model to work there is an essential role for enablers, both in terms of infrastructure and motivators, at local level, which have the capacity to encourage and sustain individual behaviour change. This is where the Public Service Board can exert their influence in supporting and providing opportunities for individuals to engage in activities under the five themes, promoting mental wellbeing for all, and moving toward the identified priority goal.

5 Moving Forward (Shift away from illbeing to wellbeing)

A review of the literature shows that the influences on mental wellbeing are multifactorial and that there is no single magic bullet that will promote mental wellbeing in the population. From the initiatives described by the World Health Organisation and the activities that fall under the Five Ways to mental wellbeing there is already a huge array of good initiatives and projects occurring in Conwy and Denbighshire supporting mental wellbeing that can both be learnt from and built upon to improve the mental wellbeing of the population.

Co-working between the PSB and established organisations and groups, such as Local Implementation Teams, has the potential to deliver at wider scale and greater than the sum of its component parts. It also generates a common understanding of the issues and opportunities around mental wellbeing. The objective being aimed at is a reduction on in the stigma associated with mental wellbeing, more people experiencing good mental wellbeing, building mental resilience and a reduction in people suffering from anxiety, depression and isolation.

Following consideration of the literature, the outcomes of the mental wellbeing workshop, engagement with key personnel and organisations supporting mental wellbeing, the following four potential project areas have been identified:

1. **Farming Community/Rural mental wellbeing** - Improving the mental health and wellbeing of farmers, their families and rural communities to overcome uncertainty and challenges in the farming industry.

Farming families and rural communities are an integral part of Wales; shaping the natural environment, culture and contributing to the wellbeing and economy of the local population. As the UK moves to departing the European Union, there is considerable uncertainty and challenges for the farming community and there is a need to support the farming/rural community to cope in this period of change and challenge.

Both Conwy and Denbighshire have high rural populations. The majority of activities relating to mental wellbeing are currently focused on the main areas of population, particularly along the north coast. This can limit accessibility for large sections of the rural population, particularly where transport options are sparse.

2. **Libraries for mental wellbeing** - Further develop libraries, as key community assets, offering mental wellbeing services and support.

The library service network covers a large and diverse geographic areas. Considerable work has taken place in Conwy and Denbighshire in developing these assets in the support of local communities. However, there is plenty of scope to further develop this service to support mental wellbeing, be it through utilisation of the spaces available in libraries or expansion and reach of current services offered, particularly in areas such as bibliotherapy and the potential of the impact of reading on mental and emotional wellbeing.

3. **Refresh of the Five Ways to mental wellbeing** - Promote and enhance the use of the Five Ways to Mental Wellbeing within the work place, supporting staff members and shaping organisational planning.

The Five Ways to mental wellbeing are all evidence based and are a set of well-established themes supporting mental wellbeing. Participation in the Five Ways to wellbeing are known to be low compared to other European nations and there is scope to further integrate the themes into PSB member organisations, within the workplace and strategic and policy development.

4. **LIT/ICAN** – Mental Health and Suicide awareness Training - Develop models of delivery within organisations and services.

This initiative seeks to building resilience in communities by supporting people to look after their own mental wellbeing and encouraging conversations about mental wellbeing. This initiative can be developed, working in conjunction with LIT/ICAN, as part of a training package for PSB organisations staff who come in contact with the public.

Coronavirus addendum

Since the development of this paper in January 2020 the coronavirus pandemic has resulted in an unprecedented situation whereby a number of actions, including lockdown, have taken place that can have a significant impact on mental health and wellbeing.

A review of the evidence of the influence of the coronavirus pandemic has been undertaken and a supplementary document produced. The supplementary document is embedded below.

2020-09-04 MWB
Coronavirus supplm

Following a review of the evidence on the impacts of the coronavirus pandemic on mental wellbeing an additional project area has been identified in support of children and young people, aligning with the priority of 'MWB for all ages'.

5. **MWB in educational settings** - further promotion and development of systems in support of mental wellbeing within educational settings.

The coronavirus pandemic is a traumatic event that threatens both physical and psychological safety. The world has altered for the population and this includes children and young people, who have experienced disruptions to multiple aspects of their lives, not least the closure of their educational settings and support networks.

The reopening of educational settings is a key component of coronavirus recovery. The impact of the pandemic on the mental wellbeing of children and young people, especially the most vulnerable and disadvantaged, means that ensuring and supporting them within educational settings is more important than ever and essential if the longer term impacts on this generation are to be minimised.

Details of the proposed projects, including potential actions, are at Annex A.

The project areas can be considered as separate entities. However, there are areas of overlap under the identified projects such that there is scope to adopt a pick and mix approach with complementing components rather than a single project.

6 Next steps / Recommendations

The following next steps / recommendation are made:

- a. PSB members determine which option(s) they wish to progress as a project in support of the mental wellbeing priority.

- b. That PSB members nominate the appropriate personnel within their organisations to participate in designing and delivering the agreed project. A multi-agency project team is required to offer strategic input and deliver against the selected project(s). Public Health Wales is happy to assist in facilitating and offering strategic input.
